## Opera House Speakers

By Branko Miletic | Tuesday, 31 May 2011

The Edifier Prisma speaker system has been designed to resemble the iconic Sydney Opera House and function as a subwoofer housing system, complete with two speaker drivers, and an auxiliary input jack to play music from any audio host.

With a separate bass and volume controls located on the rear of the sub-woofer, the Edifier Prisma allows you to manage the sound it delivers. The audio system is also easily accessible in dark spaces with a soft-touch 'standby / on' switch, illuminated by a red halo on the top of the sub-woofer.

A part of Edifier's Image line, the system's subwoofer housing is wired to the two magnetically shielded speaker drivers. A 'red-halo' rotary volume controller is also connected to the device.

The Edifier Prisma features:

- Wired rotary master volume controller with built-in headphone and MP3 input jacks
- Red 'halo' lighting standby/on switch and volume controller
- Two magnetically shielded speakers
- Separate bass control located at the rear of the subwoofer
- 3.5mm input jack
- Total power output: RMS 9W x 2 + 32W
